Education

University of Michigan, College of Engineering Ann Arbor, MI
Bachelor of Science in Engineering, Computer Science | Minor: Statistics *May 2028*

- GPA: 3.74
- Honors: UM Club of Houston Scholarship, Dean's Honor List, University Honors
- Relevant Coursework: Data Structures & Algorithms, Computer Networks, Computer Security, Web Systems, Statistical Computing, Discrete Math, Computer Organization

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, SQL
Frameworks & Tools: Playwright, Postman, TensorFlow, React Native, Flask, Expo, Node.js, React, Vite, Git
Data & ML: ETL pipelines, image classification, data cleaning, GIS-compatible data formats, statistical computing
Design: Figma, wireframing, UX prototyping

Experience

Software Engineer Intern May 2026 – Present
Daikin *Waller, TX*

- Developed a TypeScript and Playwright API automation framework validating 5 internal service endpoints across approximately 90 test scenarios, eliminating ad-hoc manual testing processes
- Built structured test reports tracking endpoint coverage, execution results, and validation status, reviewed by the engineering team to inform release decisions
- Reduced manual endpoint validation time by 99.9% through full automation across 6 test files, cutting execution from approximately 30 minutes to 86.4 milliseconds

Projects

Fruit Nutrition App | *TensorFlow, Flask, React Native, Expo, Edamam API*

- Built and trained a TensorFlow image classification model to identify fruits from photos, integrated with the Edamam Food Database API to return real-time nutritional data
- Developed a Flask backend to serve model predictions, connecting the ML pipeline to a cross-platform React Native mobile app deployed on iOS and Android via Expo
- Collaborated across a 5-person team to deliver an end-to-end AI-powered application from model training to user-facing deployment, presented at Data Science Night

LCDC Infrastructure Records Pipeline | *Python, Regex, React, Vite*

- Developed a Python ETL pipeline using regex to parse, clean, and standardize historical infrastructure records into GIS-compatible formats for Lapeer County Drain Commission
- Built a React + Vite web application to surface the cleaned data, enabling county staff to search and access records through a browser interface instead of manual file lookups
- Reduced record retrieval time by 91% through automation, with the pipeline later adopted by three government offices

Leadership & Involvement

Event Logistics & Organizations Committee Member Jan. 2026 – Present
Girls in Electrical Engineering and Computer Science (GEECS) *Ann Arbor, MI*

- Coordinated logistics for 3+ community events per month within a competitive tech organization, tracking attendance and collecting member feedback to improve future programming
- Administered a 60-member mentorship program pairing women in CS and EE, organizing monthly activities, managing engagement records, and documenting gatherings
- Spearheaded annual presentation night by coordinating scheduling, sourcing slideshow contributions, and facilitating post-event reflections across the cohort
